CLEARCOUNT CATALOG

Workshops & Templates

Practical inventory training and tools for small manufacturers and distributors.

CLEARCOUNT CONSULTING - BETTER INVENTORY. BETTER DECISIONS. BETTER RESULTS.

Not every shop needs a consultant on site. These workshops and templates package the same methods ClearCount uses in client engagements into something a small team can run on its own. For hands-on help, send James an intake note.

About ClearCount

ClearCount Consulting is led by James Blankenship, an inventory control and purchasing professional with hands-on experience in manufacturing and distribution warehouses running Epicor Kinetic, SAP, Sage 100 and Fishbowl. James has also coached soccer for more than 20 years, and he brings the same approach to operations: build the team's skills and habits so results last after the engagement ends.

Workshops

Each workshop is about two hours and includes a slide deck, a participant workbook, a practical exercise, and a 30-day action plan.

01 Cycle Counting & Inventory Accuracy

Trust your numbers again, without shutting down for a physical.

For: Inventory control staff, warehouse leads, materials managers, and owners of small manufacturers and distributors.

- Explain why record accuracy drives on-time delivery, cash and planning
- Set count frequency by ABC class and size the daily count workload

02 ABC Analysis & Reorder Points

Stock what you need, stop buying what you do not, and stop running out of nine-cent parts.

For: Buyers, planners, inventory managers, and owners who approve purchasing.

- Run an ABC analysis on your own item list
- Choose a control approach for each class

03 Receiving & Putaway Done Right

Most inventory errors walk in through the dock door. Stop them there.

For: Receiving clerks, shipping and receiving leads, warehouse supervisors, and buyers.

- Follow a receiving routine that catches errors before they enter the system
- Handle shortages, overages, damage and no-PO deliveries consistently

 (c) 2026 ClearCount Consulting. Licensed for use within the purchasing company.

04 Scrap & Variance Control

Find the material your shop is losing, and get the system to tell the truth about it.

For: Production supervisors, inventory control, cost accountants, and plant or operations managers.

- Separate planned scrap, unplanned scrap and unreported consumption
- Report scrap against the job so costs and inventory stay accurate

Formats and pricing

Format	What you get	Price
Recorded workshop	Four short video lessons with live Excel demos, the slide deck, the participant workbook, and the matching template	$149 per workshop
Recorded bundle	All four recorded workshops and all four templates	$449
